VL WOOD

Customer case

VL-WOOD →

SYSTEM **HALL**

The client

VL Wood is a family-owned enterprise in Belgium that specializes in providing high-quality garden wood solutions for business-to-business transactions. Their extensive inventory comprises impregnated and raw wood, ensuring a diverse selection to meet various project requirements.

The idea

VL-Wood wanted to increase their production with the same amount of people. Sam explains, “we wanted to increase our production capacity but with the same amount of operating people”. And while planning a move to a new site, VL-wood turned to System Hall for a solution that could help them achieve their main goal, but also help them a smooth production during the move.

The solution

The decision to contact System Hall was prompted by an issue in their production process. "Before, we couldn't plane small boards efficiently," Sam recalls. "It was a big problem for us."

After receiving recommendations, VL-Wood contacted and visited System Hall's facilities in Sweden to explore potential solutions. They looked at four different planing lines and got valuable insights into the possibilities of the machinery. Which gave VL-wood further confidence in their decision. Working with System Hall was key to reaching VL-Wood's production targets. Sam highlights the significant increase in production speed achieved with the new line, allowing them to surpass previous limitations. He also notes improvements in handling and problem-solving processes.

The collaboration

Throughout the project, Sam emphasizes the smoothness of the collaboration and the dedication of the System Hall team. "It was my first real appreciation of the collaboration," he remarks ". It helped to have people involved in the project that are technical skilled and were the goal in the negotiation was always to find a suitable solution, he continues.

The installation process was well managed by System Hall's team, ensuring a seamless transition to full operation.

A portrait of Sam Verstreken, a man with short brown hair and glasses, smiling. He is wearing a black t-shirt with a logo on the left chest. The logo consists of a white rounded rectangle containing the text 'VL WOOD' in white, with 'Meesters in timber' written in green cursive below it. The background is a plain, light-colored wall.

**“We are doing more with the
same amount of people”**

The result

The learning process with the new equipment was straightforward, thanks to its intuitive design and the support provided by System Hall's team during the installation phase. Sam recalls that it was a good process where they were able to ask questions and get things explained directly. This efficient instalment process meant that VL-Wood could quickly start working with the new machine right away.

The conclusion

The overall impact of System Hall's services and production lines on VL-Wood's operations has been very positive, where the ease of work and the production increase have been the most notable benefits.

“From start to finish, we are very pleased with the collaboration”, Sam concludes.
