

Customer case

Frödinge Hållerum

The client

Frödinge Hällorum is a family-owned sawmill with further processing in planing, rooted in Småland, serving customers both in Sweden and export markets. Frödinge Hällorum consists of two sawmills with planing lines at both sites, as well as a site at Vrångfallsvägen with two planing lines. With close proximity to the forest and strong local connections, they are able to make long-term decisions that benefit both forest owners and consumers.

Combining the flexibility of a small company with extensive expertise in wood processing, Frödinge Hällorum produces everything from roofing battens to high-quality timber.

A man with glasses and a black jacket with yellow accents stands in a factory setting. The jacket has a logo that reads "Frödinge Hållerum TOMMY".

TOMMY

Tommy Nordström, the site manager at Vrångfallsvägen of Frödinge Hållerum, highlights the ease of being able to call System Hall whenever questions arise or help is needed. "It's easy for System Hall to connect remotely, quickly identify solutions, and resolve any issues that come up," he says.

**“Smooth and safe,”
is how Tommy describes it.**

The idea & solution

The collaboration between Frödinge Hällorum AB and System Hall dates back to the 1980s when they first met Tomas Hall at a trade fair. Since then, a positive and long-lasting partnership has developed, involving everything from complete machine lines to maintenance, rebuilds, and additional machine parts over the years. System Hall continuously optimizes the machine lines, adapting them to market needs. Integrating new components into the existing control systems has never been a problem.

The collaboration

What has been particularly positive is that System Hall provides valuable tips and ideas. There is a lot of back-and-forth communication to determine what works best for Frödinge Hållerum. "It really is custom made," Tommy adds.

The installation process has always gone smoothly, with skilled technicians from System Hall ensuring swift setups. Frödinge Hållerum takes comfort in knowing that System Hall has experience installing similar machines. "We always get immediate assistance or a clear plan for how to address any issues."

The results

The machines have improved work processes and the work environment. With the proactive team at Frödinge Hällorum, they can always contribute their own input and collaborate on ideas to optimize efficiency as much as possible. "Things run more efficiently now, and minor issues can be better addressed by making adjustments or adding new features."

Safety has also greatly improved. "It's more built into the products and services now than it used to be," he mentions. Safety is a key aspect of every project that System Hall undertakes, and the staff has experienced a significant improvement in this regard.

The conclusion

System Hall has been influential in helping to optimize our existing lines, which has always been the goal—to make everything more efficient. "We receive excellent support and service, and spare parts are delivered quickly when needed," Tommy concludes.
