# KÅRARP TIMBER'S JOURNEY TOWARDS INCREASED EFFICIENCY AND PROFITABILITY

Kårarp Timber, founded in 1979 by Leif Nilsson, has had a long and successful journey in the woodworking industry since its inception. The company has always focused on innovation and efficiency. Over the years, they have steadily improved their processes to keep pace with market demands.

For over 40 years, Kårarp has maintained a close partnership with System Hall. From the first sale of a bundler to the modern machinery solutions of today, the collaboration has been a continuous journey towards improved efficiency and higher productivity.

# **A PARTNERSHIP THAT DELIVERS SUSTAINABLE RESULTS**

For Kårarp, the collaboration with System Hall has been a key part of the company's development. Over the years, Kårarp has invested in several strategic solutions to meet both production challenges and new opportunities.

A large industrial planing machine, specifically a Hall System model, is shown in a wood mill. The machine is light-colored with orange safety components. It is processing long wooden planks. The background shows the interior of a large industrial building with a high ceiling and metal beams. A semi-transparent text box is overlaid on the top left of the image.

One of the major changes came through an investment in a new planing infeder in 2024, which led to a productivity increase of 5–15%, depending on the various dimensions being processed. For Kårarp, this investment has not only been about improving capacity, but also about creating a more stable workflow and reducing downtime.

# ADAPTATION AND IMPROVEMENT TO MEET MARKET DEMANDS

With each investment, Kårarp Timber has achieved noticeable improvements – not only in capacity but also in operational reliability and personnel efficiency.

The update of safety equipment in 2014 was an important step in maintaining a high safety standard, although it temporarily affected production. At the same time, solutions like improved strip laying and package handling have led to more efficient operations and reduced workload.

# STRONGER TOGETHER

Kårarp Timber continues to evolve and improve its production with the help of System Hall's after-sales services. By investing in modern machinery solutions and ensuring continuous follow-up, the company has been able to optimize its processes and ensure stable operations.

This partnership demonstrates how long-term investments in the right technology and collaborations not only enhance production but also strengthen Kårarp's competitiveness in the market.
